

ADO = Azure DevOps Organizations

ADO = Azure DevOps

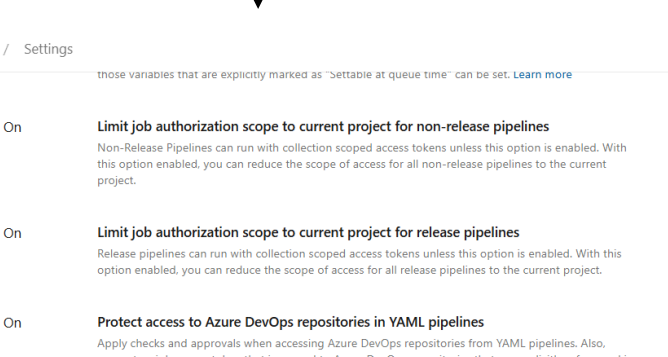

Azure DevOps is a cloud-based DevOps platform from **Microsoft** that helps teams plan, develop, build, test, and deploy applications.

Main Services in ADO

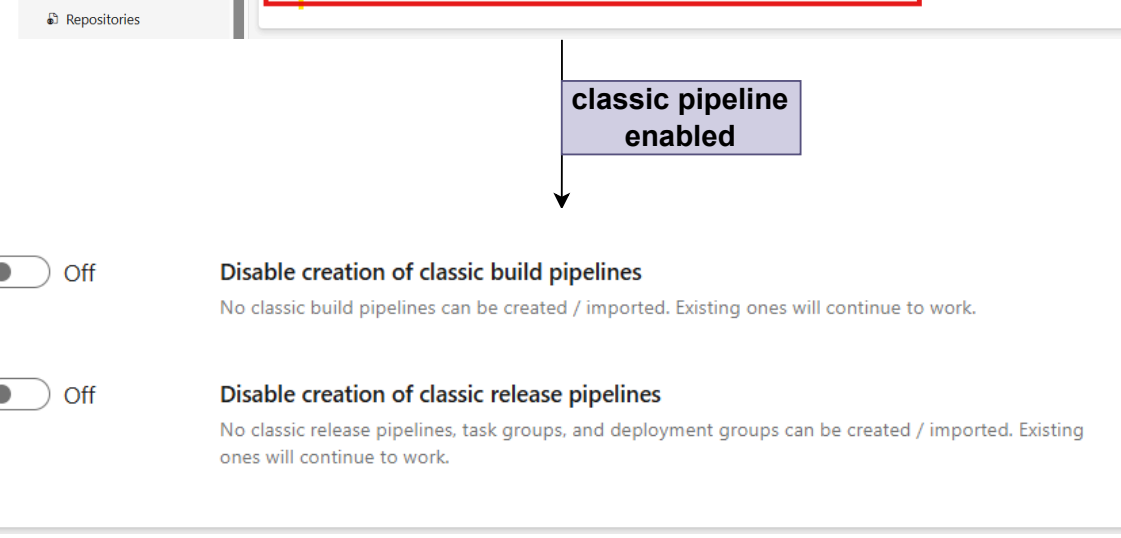

- Azure Boards**
 - Work Items
 - User Stories
 - Tasks
 - Bugs
 - Sprint Planning
- Azure Repos**
 - Git repositories
 - Branching
 - Pull Requests
 - Code Reviews
- Azure Pipelines**
 - CI/CD automation
 - Build and Release pipelines
 - YAML pipelines
- Azure Test Plans**
 - Manual testing
 - Test cases
 - Test execution
- Azure Artifacts**
 - Package management
 - NuGet, npm, Maven packages

Interview Answer (Spoken Style)

"Azure DevOps is Microsoft's DevOps platform used for end-to-end software delivery. We use Azure Repos for source code management, Azure Boards for project tracking, and Azure Pipelines for CI/CD automation. In my current project, I use YAML-based pipelines to provision Azure infrastructure through Terraform and deploy applications automatically."

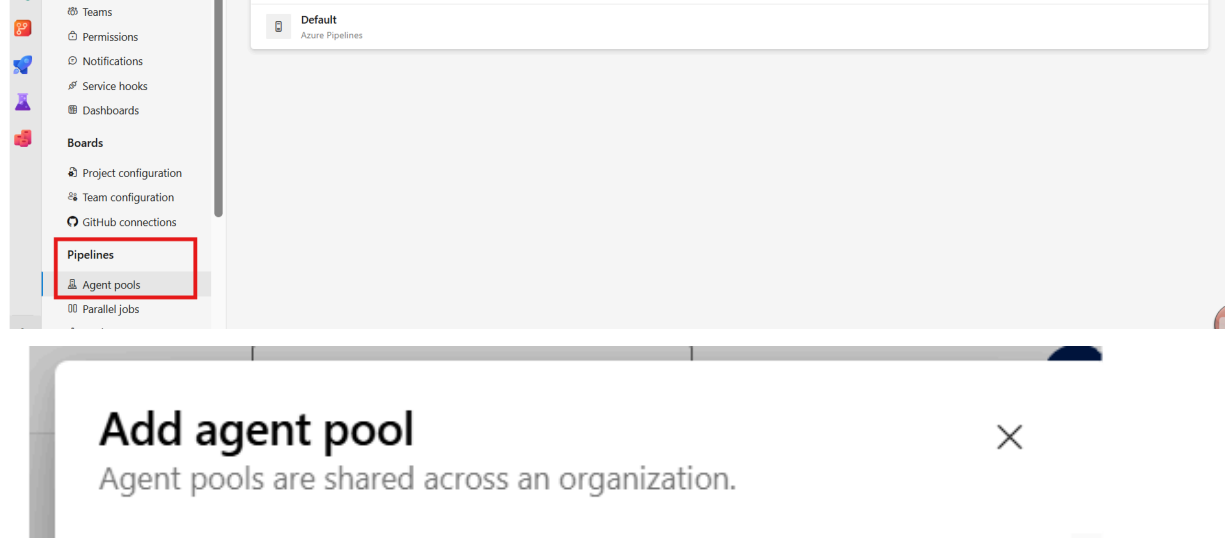

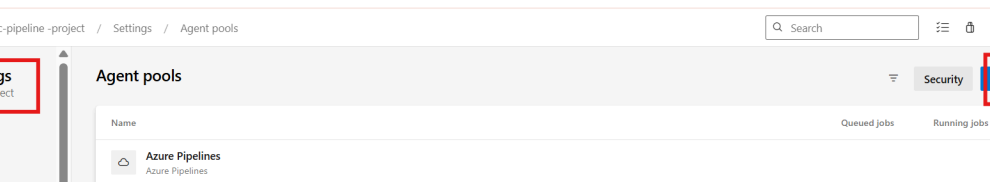

classic pipeline

classic pipeline enabled

- ☐ Off **Disable creation of classic build pipelines**
No classic build pipelines can be created / imported. Existing ones will continue to work.
- ☐ Off **Disable creation of classic release pipelines**
No classic release pipelines, task groups, and deployment groups can be created / imported. Existing ones will continue to work.

Add agent pool

Agent pools are shared across an organization.

Pool type:

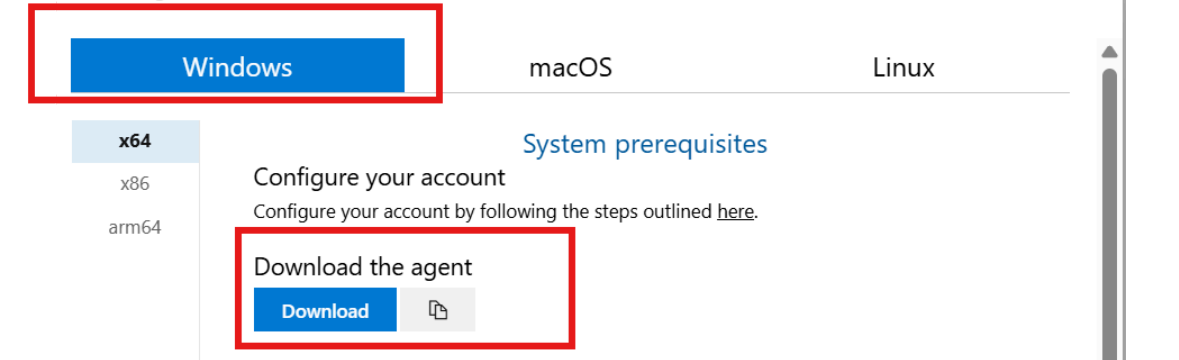

- ☐ Managed DevOps Pool
- ☒ Self-hosted
- ☐ Azure virtual machine scale set

Name:

Description (optional):

Pipeline permissions: ☒ Grant access permission to all pipelines

Create

Extracting in the download folder

cd C:\agents

run command > .\config.cmd

Server URL

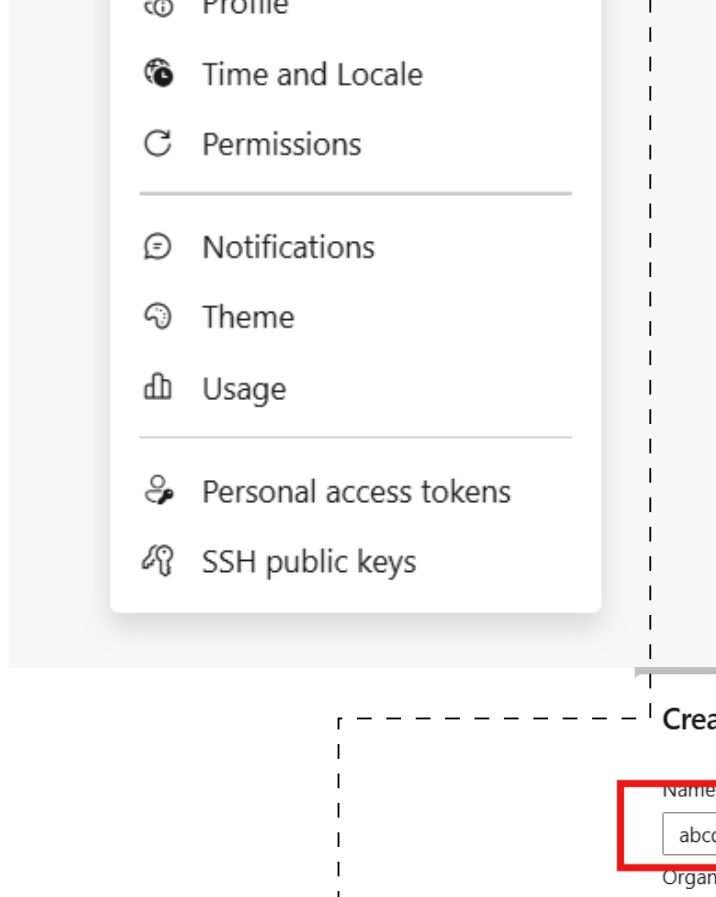

https://dev.azure.com/{your-organization}

Enter server URL > https://dev.azure.com/satyatech

Enter authentication type (press enter for PAT) >

Enter personal access token >

5GouqVwWzN78TGF8R1zaDFofmVqGZUk4b7QcM6FLU6Vh73Dr71QQJ99CFACAAAAcBoU3Aft

Create a new personal access token

Name:

Organization:

Expiration (UTC): 9/1/2026

Scopes: ☒ Full access

Advanced Security: ☐ Read ☐ Read & write ☐ Read, write, & manage

Agent Pools: ☐ Read ☒ Read & manage

Create

Enter agent pool (press enter for default) >

Enter agent pool (press enter for default) > abcdagent

Enter agent name (press enter for SATYAPRAKASH) > abcdagent

Connecting to the server.

Successfully added the agent

Testing agent connection.

Run interactively

.\run.cmd

```
Enter server URL > https://dev.azure.com/satya-tech
Enter authentication type (press enter for PAT) >
Enter personal access token >
*****
Connecting to server ...

>> Register Agent:

Enter agent pool (press enter for default) > abcdagent
Enter agent name (press enter for SATYAPRAKASH) > abcdagent
