

Azure DevOps services

	Boards Flexible agile planning with boards and cross-product issues	☒ On
	Repos Repos, pull requests, advanced file management and more	☒ On
	Pipelines Build, manage, and scale your deployments to the cloud	☒ On
	Test Plans Structured manual testing at any scale for teams of all sizes	☒ On
	Artifacts Continuous delivery with artifact feeds containing NuGet, npm, Maven, Universal, and Python packages	☒ On

ADO = Azure DevOps

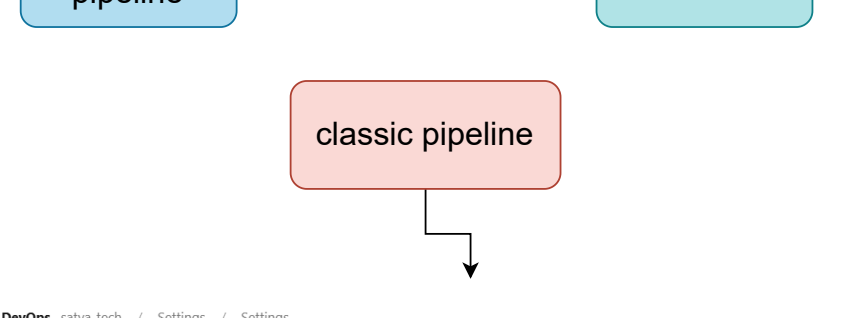

Azure DevOps is a cloud-based DevOps platform from [Microsoft](#) that helps teams plan, develop, build, test, and deploy applications.

Main Services in ADO

- Azure Boards**
 - Work Items
 - User Stories
 - Tasks
 - Bugs
 - Sprint Planning
- Azure Repos**
 - Git repositories
 - Branching
 - Pull Requests
 - Code Reviews
- Azure Pipelines**
 - CI/CD automation
 - Build and Release pipelines
 - YAML pipelines
- Azure Test Plans**
 - Manual testing
 - Test cases
 - Test execution
- Azure Artifacts**
 - Package management
 - NuGet, npm, Maven packages

Interview Answer (Spoken Style)

"Azure DevOps is Microsoft's DevOps platform used for end-to-end software delivery. We use Azure Repos for source code management, Azure Boards for project tracking, and Azure Pipelines for CI/CD automation. In my current project, I use YAML-based pipelines to provision Azure infrastructure through Terraform and deploy applications automatically."

 - Repositories

Limit job authorization scope to current project for non-release pipelines ☒ On
Non-Release Pipelines can run with collection scoped access tokens unless this option is enabled. With this option enabled, you can reduce the scope of access for all non-release pipelines to the current project.

Limit job authorization scope to current project for release pipelines ☒ On
Release pipelines can run with collection scoped access tokens unless this option is enabled. With this option enabled, you can reduce the scope of access for all release pipelines to the current project.

Protect access to Azure DevOps repositories in YAML pipelines ☒ On
Apply checks and approvals when accessing Azure DevOps repositories from YAML pipelines. Also, generate a job access token that is scoped to Azure DevOps repositories that are explicitly referenced in the YAML pipeline.

Disable stage chooser ☐ Off
With this enabled, users will not be able to select stages to skip from the Queue Pipeline panel.

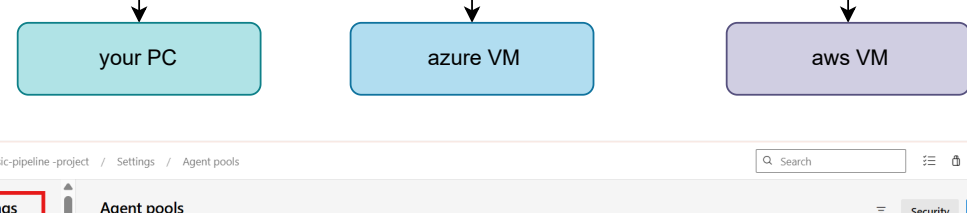

Disable creation of classic build pipelines ☒ On
No classic build pipelines can be created / imported. Existing ones will continue to work.

Disable creation of classic release pipelines ☒ On
No classic release pipelines, task groups, and deployment groups can be created / imported. Existing ones will continue to work.

classic pipeline enabled

☐ Off **Disable creation of classic build pipelines**
No classic build pipelines can be created / imported. Existing ones will continue to work.

☐ Off **Disable creation of classic release pipelines**
No classic release pipelines, task groups, and deployment groups can be created / imported. Existing ones will continue to work.

Agent pools

Name	Queue	Jobs	Running jobs
Azure Pipelines	Azure Pipelines		
Default	Azure Pipelines		

Add pool

Add agent pool

Agent pools are shared across an organization.

Pool type:

☐ Managed DevOps Pool

Reduce the effort spent in maintaining custom agents by creating a [Microsoft managed pool](#) of scalable agents. [Learn more.](#)

☒ Self-hosted

Create a pool of custom agents hosted on your own infrastructure for maximum control and flexibility. [Learn more.](#)

☐ Azure virtual machine scale set

Create a pool of custom agents based on an Azure Virtual machine scale set hosted in your own Azure subscription. [View configuration instructions.](#)

Name:

classicagent

Description (optional):

Markdown supported.

Pipeline permissions:

☒ Grant access permission to all pipelines

Create

classicagent

Agents

Add your first agent

Manage agents and run pipelines on this pool.

New agent
